Tom,

The Port will incorporate your comments into the SAP prior to implementing it. The following provides clarification to your comments, based upon my discussion with you and Alex Liverman:

1. The Port will use the JSCS SW Guidance in the SAP and not the 1200Z protocols. Four rounds of SW samples will be collected using the JSCS SW Guidance criteria for qualifying events. The stipulation of approximately two weeks between sampling events is no longer required.
2. Oil & Grease and pH analyses will be deleted from the SAP.
3. Arsenic will be analyzed by EPA Method 1632 to meet the 0.05ug/L MDL.
4. All PCB Aroclors will be analyzed for and reported, not just 1260.
5. We confirmed with our Lab that the phthalate MDLs specified in the SAP by EPA Method 525.2 are correct and are below the JSCS screening levels. Method 525.2 will be used for phthalates.

We will proceed with implementation of the SW SAP, as modified above, unless otherwise notified.

Subject: RE: Terminal 2 – Proposed Storm Water Sampling Letter

Dwight-

Thanks for submitting this stormwater sampling and analysis plan (SAP). Please confirm that you will incorporate the following comments into the SAP prior to implementing it.

- 1) Please do not use the old 1200Z protocols and parameters. Since the Port is seeking a Source Control Decision/NFA under the Joint Source Control Strategy (JSCS, DEQ 12/05, revised 2007), please use the JSCS SW Guidance.
- 2) Oil & Grease and pH analyses are not required (unless you want these).
- 3) The arsenic MDL should be 0.05 µg/L.
- 4) Analyze for and report all PCB Aroclors, not just 1260.
- 5) It appears that your MDLs for the phthalates method EPA 525.2 is incorrect; DEQ understands that it is 5 µg/L, which is too high. Please use Method 8270-SIM (as proposed for PAHs).

Please contact me if you have further questions, and respond to this email by 3/30/12.

Thanks-
 Tom
